WORK EXPERIENCES

Mega Cat Studios

Game Engineer

July 2024 – April 2026

- Contributed to **God of War: Sons of Sparta** (PS5) as a contractor Game Engineer, implementing assigned enemy AI behaviors and integrating new gameplay features for the **Pit of Agonies** co-op mode.
- Stabilized **60 FPS performance on PS5 Low Energy Mode** during heavy game combat in **Pit of Agonies** by architecting object pooling with Unity Addressables and pre-warming VFX using Pipeline State Objects to prevent runtime shader compilation hitches.
- Collaborated with VFX artists to optimize critical FPS fluctuation hotspots in **Pit of Agonies** from the frontend side, analyzing profiling telemetry to adjust overdraw limits and rendering efficiency during intense combat scenarios.
- Diagnosed and resolved **Pit of Agonies** game crashes and reduced loading time by identifying root-cause bugs through Unity Profiler, code analysis, and Unity Scene inspection in collaboration with the internal MCS Console team.

DKMads Co., Ltd

Senior Game Developer

Feb 2023 – April 2024

- Developed educational, casual, and turn-based optimized In-App Web games using Unity WebGL and utilized Flutter Web-View content.
- Worked closely with graphic designers to create game concepts and UI/UX designs from initial to final state, especially for kids who age around 3 ~ 5.
- Developed whole multiplayer Unity WebGL game using Socket.io in Node.js by integrating back and forth to main application to invite or challenge in-app and in-game active users.

Myanmar51 Studio

Unity Game Developer & QC

Nov 2020 – Nov 2022

- Replaced Unity Ads SDK with another one called LionSDK by AppLovin and upgraded old SDK with new updated one, and fixed bugs throughout upgrading process.
- Made quick game prototypes within a week per one prototype with quality does matter. · Guided interns and new juniors how to get the qualities, effects by using Unity Shaders, and post process the game what the clients want.
- Published two or more in-house F2P games to PlayStore and AppStore, integrated with AppLovin monetizing SDK.
- Involved in adding new features such as bingo systems, localizations, UI effects, and random gift systems for Tiny Park (Sanrio Characters' 10 mini games) and fixing bugs of other developers.
- Made closest AAA quality rendered videos from initial to final state based on clients' scripts by utilizing full potentials of Unity HDRP with timelines and sequences.
- Researched and made custom Unity Shaders and VFX effects based on requirements.

EDUCATION

Technological University (Hmawbi)

Dec 2013 – Nov 2019

Bachelor of Engineering in Mechatronics | Cumulative GPA: 4.49/5.0

- Core Engineering & AI: Built a strong foundation in electro-mechanical integration, control systems, and the theoretical concepts of Neural Networks while independently studying C++.
- Industrial Automation: Programmed PLC ladder diagrams for pneumatic/hydraulic cylinders and used PIC BASIC for PIC microcontrollers.

SKILLS & INTERESTS

Computer: **C#**, **Unity** (Built-In/ URP/ HDRP), **Blender 3D** (Modeling, Animations),
Python (Machine Learning, Data Science), **Node.js** (SocketIO), **HTML/CSS**, **JavaScript**.
Familiarities: AWS, Firebase, Google Cloud Platform, IBM Cloud, Linux.

Language: English (Upper B2/Fluent) | Myanmar (Native).

Interests: Career development, learning new programming language, open world gaming, anime, stylized graphics.
